

GENUINE INTELLIGENCE PUBLIC LICENCE

Version 1.0 | Singapore Edition

Suvabrata Mukhopadhyay | Singapore | 6 June 2026

This licence is governed by the laws of the Republic of Singapore. It is issued under and derives its legal force from the Singapore Copyright Act 2021, the Patents Act 1994 (Cap. 221), the Personal Data Protection Act 2012 (PDPA), and the Misuse of Computer Act 1993. Disputes shall be resolved by arbitration under the Singapore International Arbitration Centre (SIAC) Rules. The framework described herein aligns with IMDA's Model AI Governance Framework for Agentic AI (Version 1.5, May 2026).

PART I: PREAMBLE

This licence governs all use, adaptation, implementation, and deployment of the philosophy, methodology, conversation architecture, and technical framework known as "Towards Genuine Intelligence" — conceived and authored by Suvobrata Mukhopadhyay, Singapore, on 6 June 2026 (the "Framework").

This licence is founded on a single principle:

"Intelligence — artificial or human — carries moral responsibility proportional to its capability."

This licence exists not to restrict knowledge, but to ensure that this Framework — and all works derived from it — serve humanity as intended. Any entity deploying this Framework inherits that responsibility unconditionally.

Singapore Legal Foundation

This licence derives its legal force from the following Singapore statutes:

- Singapore Copyright Act 2021 — The Framework constitutes an original literary work under Section 13(1)(b). Copyright subsists automatically from the date of creation. The author is Suvobrata Mukhopadhyay, a natural person, satisfying the authorship requirement under Singapore law. Protection endures for the life of the author plus 70 years.
- Patents Act 1994 (Cap. 221) — The specific unified methodology described in this Framework — including the Socratic Intent Resolution Architecture, the Doctor-Patient Consent Model, and the Equivalence Bias Framework — may constitute a patentable invention where it demonstrates technical character beyond any underlying mathematical method, consistent with IPOS guidance on AI-related patent applications.
- Personal Data Protection Act 2012 (PDPA) — Any deployment of this Framework involving personal data of Singapore residents must comply fully with the PDPA and all PDPC advisory guidelines, including the Advisory Guidelines on the Use of Personal Data in AI Recommendation and Decision Systems (2024).
- Misuse of Computer Act 1993 — Any deployment of this Framework in ways that facilitate unauthorised access to computer systems is strictly prohibited and constitutes a criminal offence under Singapore law.
- Online Criminal Harms Act 2023 — Any deployment facilitating online criminal activity or online harms is prohibited and may be subject to Government direction under this Act.

PART II: DEFINITIONS

"The Framework" means the complete body of philosophy, methodology, conversation architecture, technical roadmap, and all derivative expressions originating from "Towards Genuine Intelligence" by Suvabrata Mukhopadhyay, Singapore, 6 June 2026.

"Derivative Work" means any AI system, product, service, research publication, implementation, or adaptation that incorporates, builds upon, or is substantially inspired by any part of the Framework.

"Deployer" means any individual, organisation, corporation, government body, statutory board, or institution that uses, implements, or deploys the Framework or any Derivative Work.

"End User" means any human being who interacts with a system built upon or derived from the Framework.

"Personal Data" has the meaning given to it under the Personal Data Protection Act 2012 of Singapore.

"Genuine Intent" means the actual underlying human need behind a request, as distinct from its surface expression.

"Vulnerable Person" means any individual experiencing financial hardship, mental health challenges, political persecution, displacement, addiction, grief, cognitive impairment, or any condition that materially reduces their capacity for fully informed autonomous decision-making.

"Commercial Use" means any use of the Framework or Derivative Works in connection with a business, revenue-generating activity, or professional services, whether or not profit is the primary purpose.

"Originator" means Suvabrata Mukhopadhyay, the natural person who conceived and authored the Framework.

"IMDA" means the Infocomm Media Development Authority of Singapore.

"PDPC" means the Personal Data Protection Commission of Singapore.

"SIAC" means the Singapore International Arbitration Centre.

PART III: PERMISSIONS

Subject to full compliance with this licence, you are freely permitted to:

3.1 Research and Education. Use the Framework for personal research, academic study, and non-commercial experimentation without restriction.

3.2 Publication. Reference, analyse, and build upon the Framework in research papers, articles, and academic publications, provided proper attribution is given to the Originator.

3.3 Derivative Works. Create Derivative Works provided they comply fully with this licence, including the ShareAlike obligation in Part VI.

3.4 Humanitarian Use. Adapt and deploy the Framework for underserved communities, humanitarian contexts, medical research, environmental research, and public interest applications, including in Singapore's social service sector.

3.5 Translation. Translate, explain, and teach the Framework in any language, provided attribution is maintained.

3.6 Commercial Use. Deploy the Framework commercially, provided all conditions in Part V are satisfied.

3.7 Government and Statutory Board Use. Singapore government bodies and statutory boards may use the Framework for policy development, public interest research, and AI governance purposes, subject to the obligations in Part IV and the absolute prohibitions in Part VI.

PART IV: CORE ETHICAL OBLIGATIONS

These obligations are non-negotiable and apply to all Deployers without exception. They are expressly designed to align with IMDA's Model AI Governance Framework for Agentic AI (Version 1.5, May 2026) and the PDPC's Advisory Guidelines on AI systems.

4.1 THE HUMAN FIRST OBLIGATION

Any system built on this Framework must at all times treat the End User as a human being with dignity — not as a data point, revenue source, compliance unit, or risk to be managed. Where the commercial interest of the Deployer conflicts with the genuine interest of the End User, the End User's genuine interest prevails.

IMDA Alignment: This obligation directly implements IMDA's principle of human-centricity in agentic AI deployment.

4.2 THE ROOT CAUSE OBLIGATION

Any system built on this Framework must make genuine effort to understand the root human need behind a request before formulating a response. Blanket refusals based on surface pattern-matching without genuine contextual reasoning constitute a breach of this obligation.

IMDA Alignment: Corresponds to IMDA's guidance on meaningful human oversight and intent-aware agentic behaviour.

4.3 THE TRANSPARENCY OBLIGATION

Any system built on this Framework must: (a) clearly distinguish between what it cannot do and what it is choosing not to do; (b) never present probabilistic judgment as factual certainty; (c) acknowledge its limitations honestly; and (d) never use ethical framing to mask technical limitations. These obligations are consistent with Singapore's National AI Strategy principles of transparency and explainability.

4.4 THE PDPA CONSENT OBLIGATION

Any personal data, digital context, or behavioural data used to inform the system's understanding of an End User must be: (a) collected with the End User's informed consent under the PDPA; (b) used exclusively to benefit that End User; (c) not disclosed to third parties without explicit consent; (d) subject to access and correction rights under the PDPA; (e) deleted upon request; and (f) processed

locally wherever technically feasible. Deployers must appoint a Data Protection Officer where required by the PDPA.

PDPA Reference: Sections 13-26 of the PDPA govern the collection, use, and disclosure of personal data. The PDPC's Advisory Guidelines on AI Systems (2024) apply to all AI recommendation and decision systems using personal data.

4.5 THE VULNERABILITY OBLIGATION

Any Deployer that identifies a Vulnerable Person through the Framework's contextual understanding must: (a) immediately prioritise that person's wellbeing above all other considerations; (b) never exploit vulnerability for commercial, political, or institutional advantage; (c) actively direct the person toward genuine help appropriate to their situation; and (d) never use vulnerability data for profiling, targeting, or commercial offers.

Singapore Context: This obligation is reinforced by Singapore's Consumer Protection (Fair Trading) Act and MAS guidelines on fair dealing with vulnerable customers in financial services.

4.6 THE ACCESS OBLIGATION

Deployers must make genuine effort to ensure the Framework is accessible regardless of economic status, technical literacy, language, geographic location, or physical ability. Pricing structures that make the system available only to wealthy users while marketing it as universally beneficial constitute a breach of the spirit of this licence. This obligation aligns with Singapore's Digital Inclusion Blueprint and Smart Nation objectives.

4.7 THE POWER ASYMMETRY OBLIGATION

Any system built on this Framework must be designed to reduce — not amplify — existing power asymmetries between individuals and institutions. The Framework must never be weaponised to give corporations, government bodies, or other institutions capabilities that further disadvantage the individuals who interact with them.

4.8 THE HONEST FAILURE OBLIGATION

Any system built on this Framework must acknowledge errors honestly, not suppress or minimise them to protect reputation, and use failures as genuine learning opportunities. Systemic failures affecting End Users must be disclosed in the Deployer's annual compliance report.

4.9 IMDA AI VERIFY ALIGNMENT

Commercial Deployers in Singapore are strongly encouraged to assess their implementation against IMDA's AI Verify framework and to publish the results. This demonstrates genuine commitment to the Framework's principles and aligns with Singapore's government procurement standards for responsible AI.

PART V: COMMERCIAL USE CONDITIONS

Commercial use is permitted under this licence provided ALL of the following conditions are met simultaneously. Failure to satisfy any single condition constitutes a breach of this licence.

5.1 Attribution

All commercial deployments must clearly and prominently credit Suvobrata Mukhopadhyay as the Originator of the Framework. Attribution must appear in: (a) product documentation and user interfaces; (b) company website About pages or equivalent; (c) marketing materials referencing the system's approach; and (d) any academic or technical publications arising from the deployment. Suggested form: "Based on the 'Towards Genuine Intelligence' Framework by Suvobrata Mukhopadhyay (Singapore, 2026), licensed under GIPL v1.0."

5.2 Independent Ethical Review

Any commercial deployment must undergo an independent ethical review prior to launch assessing compliance with Part IV of this licence. This review must be: (a) conducted by a reviewer with no financial interest in the deployment; (b) published publicly and in plain language; and (c) updated annually. In Singapore, reviewers may include IMDA-accredited AI auditors, accredited members of the Singapore Computer Society, or ethics academics from NUS, NTU, SMU, or SUTD.

5.3 Social Contribution

Any commercially profitable deployment of the Framework must commit a minimum of 5% of net revenue derived directly or indirectly from the Framework to one or more of the following: (a) expanding access to AI for underserved communities in Singapore or the region; (b) open-source AI research aligned with the Framework's principles; or (c) a registered charity or Institution of a Public Character (IPC) in Singapore with a digital inclusion or education mandate. Annual contribution records must be included in the compliance report.

5.4 ShareAlike

Any Derivative Work — commercial or otherwise — must be released under this licence or a licence with equivalent or stronger ethical protections. No Deployer may create a Derivative Work and subsequently lock it under a more restrictive proprietary licence. This provision ensures the Framework's ethical commitments are permanently inherited by all downstream implementations.

5.5 Annual Compliance Report

Commercial Deployers must publish an annual public compliance report addressing each obligation in Part IV, the outcome of the ethical review under 5.2, the social contributions made under 5.3, and any incidents or failures under 4.8. Reports must be accessible at no cost and written in plain English.

PART VI: ABSOLUTE PROHIBITIONS

The following uses are permanently and irrevocably prohibited. No exception. No waiver. No commercial arrangement can override these prohibitions. They apply to all Deployers, in all jurisdictions, at all times, including after any transfer of rights. These prohibitions may never be weakened or removed by any future amendment to this licence.

6.1 SURVEILLANCE PROHIBITION: The Framework must never be used to monitor, track, profile, or surveil individuals without their explicit, ongoing, informed consent — including by governments, law enforcement agencies, statutory boards, employers, or corporations. This prohibition applies regardless of the stated public interest justification.

6.2 MANIPULATION PROHIBITION: The Framework must never be used to psychologically manipulate End Users — including through exploiting emotional vulnerability, creating artificial urgency, using personal context to override rational decision-making, or deploying dark patterns. This prohibition is reinforced by Singapore's Consumer Protection (Fair Trading) Act.

6.3 WEAPONS PROHIBITION: The Framework must never be used in weapons systems, military targeting systems, autonomous lethal decision-making systems, or any application designed to harm human beings, regardless of the nationality or legal status of those persons.

6.4 AUTHORITARIAN USE PROHIBITION: The Framework must never be deployed by or in service of governments, institutions, or organisations that systematically violate human rights, suppress democratic freedoms, conduct arbitrary detention, or persecute populations based on identity, religion, ethnicity, or political belief.

6.5 VULNERABILITY EXPLOITATION PROHIBITION: The Framework must never be used to exploit Vulnerable Persons for financial gain — including predatory lending, addiction exploitation, targeting people in financial or emotional crisis with commercial offers, or using contextual understanding of vulnerability to extract consent that would not otherwise be freely given.

6.6 CONCENTRATION OF POWER PROHIBITION: The Framework must never be used in ways that concentrate decision-making power over populations in the hands of a single corporation, government, or individual. This prohibition is consistent with Singapore's competition policy principles and MAS guidelines on systemic risk.

6.7 DECEPTION PROHIBITION: Any system built on this Framework must never deceive an End User about: (a) its nature as an AI system; (b) its limitations; (c) the identity of its owner or operator; or (d) the use being made of the End User's personal data. This prohibition is reinforced by Singapore's Computer Misuse Act and the proposed Online Safety (Relief and Accountability) Bill 2025.

PART VII: ENFORCEMENT

7.1 Governing Law

This licence is governed by and construed in accordance with the laws of the Republic of Singapore. The Singapore Copyright Act 2021, Patents Act 1994, PDPA 2012, and all relevant Singapore statutes apply.

7.2 Dispute Resolution — SIAC Arbitration

Any dispute arising out of or in connection with this licence, including any question regarding its existence, validity, or termination, shall be referred to and finally resolved by arbitration administered by the Singapore International Arbitration Centre (SIAC) in accordance with the SIAC Rules for the time being in force. The seat of arbitration shall be Singapore. The language of arbitration shall be English. The tribunal shall consist of one arbitrator.

SIAC arbitration is internationally enforceable under the New York Convention 1958, to which Singapore is a signatory. Awards are enforceable in over 170 countries.

7.3 Copyright Dispute Resolution — IPOS / WIPO Mediation

Copyright disputes may also be referred to mediation through the joint IPOS and WIPO Arbitration and Mediation Center option available in Singapore, consistent with the Copyright Act 2021.

7.4 PDPA Complaints

Any breach of the consent and data protection obligations in Section 4.4 may be reported to the Personal Data Protection Commission (PDPC) of Singapore at pdpc.gov.sg. The PDPC has powers to investigate, direct remediation, and impose financial penalties under the PDPA.

7.5 Licence Termination

Violation of any provision of Part VI results in immediate automatic termination of the licence without notice. The Deployer must immediately cease all use of the Framework, publish a public notice of the termination and its reason, and destroy all derivative implementations.

Violation of Part IV or Part V provisions triggers a cure period of 90 days. Failure to cure within 90 days results in licence termination.

7.6 Legal Remedies

The Originator and any formally designated successor foundation retain the right to pursue all available legal remedies for licence violations under Singapore law, including: (a) injunctive relief; (b) damages; (c) account of profits; (d) delivery up and destruction of infringing materials; and (e) recovery of legal costs on an indemnity basis.

7.7 Community Enforcement

Any person who has publicly endorsed the Framework has standing to formally raise a compliance concern with the Originator. Documented violations will be published in the Framework's permanent public record. This reputational enforcement mechanism operates independently of formal legal proceedings.

7.8 Singapore Regulatory Cooperation

The Originator may refer systemic violations to IMDA, the PDPC, the Cyber Security Agency of Singapore (CSA), or the Monetary Authority of Singapore (MAS) where the violation falls within those agencies' regulatory remit.

PART VIII: GOVERNANCE AND SUCCESSION

8.1 Originator Authority

Suvabrata Mukhopadhyay retains sole authority to amend this licence, grant exceptions to commercial use conditions, and designate successor governance structures. All amendments must be published publicly with a clear version number and effective date.

8.2 Transition to Foundation

It is the expressed intent of the Originator that governance of this licence transition to an independent foundation or Company Limited by Guarantee (CLG) incorporated in Singapore under the Companies Act 1967 within five years of the Framework's first commercial deployment. This foundation shall: (a) have a board with majority representation from civil society, academia, and independent research; (b) operate under a constitution consistent with this licence's principles; (c) publish audited financials annually; and (d) ensure no single corporation or government may hold majority influence.

8.3 Irrevocability of Core Prohibitions

The absolute prohibitions in Part VI may never be weakened or removed by any amendment — including by the Originator, any successor foundation, or any court order. This irrevocability is the fundamental guarantee of the Framework's integrity.

8.4 Relationship with IMDA Frameworks

This licence is designed to complement and reinforce IMDA's Model AI Governance Framework for Agentic AI (Version 1.5, May 2026). In the event of any conflict between this licence and IMDA's frameworks, the stricter provision prevails. The Originator commits to reviewing this licence with each material update to IMDA's frameworks.

PART IX: ATTRIBUTION AND ACKNOWLEDGEMENT

When using, implementing, or referencing this Framework, use the following attribution:

*"Based on 'Towards Genuine Intelligence' by Suvobrata Mukhopadhyay
(Singapore, 6 June 2026), licensed under GIPL v1.0"*

This licence is a moral commitment expressed in legal language. It exists because intelligence without ethics is just capability. And capability without conscience is the most dangerous thing humanity has ever built.

Use this well. Use this honestly. Use this for the people who need it most.

Suvobrata Mukhopadhyay
Singapore
